

Product Components

Components	Component number	Size-1	Size-2
		500 μ L	2.5 mL
DL5000 DNA Marker	RM30231	1 \times 500 μ L	5 \times 500 μ L

Product Description

The DL5000 DNA Marker is a ready-to-use DNA Marker, which is pre-mixed with loading dye for direct gelloading. This product consists of 8 individual DNA fragments: 100 bp, 250 bp, 500 bp, 750 bp, 1000 bp, 2000 bp, 3000 bp and 5000 bp derived from a mixture of PCR products and specifically digested plasmid DNA. The 2000 bp and 750 bp fragment are present at increased intensity for easy identification.

Storage

Store at -20°C for long-term storage. Store at 4°C after thawing for short-term use and avoid repeated freezing and thawing.

Notes

1. Please thaw and mix thoroughly before use.
2. Please change the electrophoresis buffer in time, and use freshly prepared agarose gel to avoid affecting the electrophoresis results.

Experiment Process

1. As a ready-to-use product, load 5 μ L on gel for each sample is recommended, and if the well is wide, loading volume can be increased appropriately for electrophoresis.
2. The recommended condition is 1 \times TAE buffer or 0.5 \times TBE buffer, 1%-2% agarose gel, and 5 V/cm between positive and negative electrodes.
3. Use UV transilluminator to detect DNA bands stained with nucleic acids stain dye.
4. The electrophoresis results of the DL5000 DNA Marker are shown below.
